

AEROSEEK

ANTI-DRONE SOLUTIONS

ABOUT AEROSEEK

Shenzhen Polaris Security Technology Co., Ltd. (Polaris Security) is a leading low-altitude drone security solution provider in China, committed to providing the world's best drone security guarantee products and solutions, and safeguarding airspace safety.

With years of experience, the company has rich comprehensive experience in anti-drone measures. Focused on technological innovation in drone safety, it is committed to researching and developing more portable and efficient drone prevention and control products.

The **Hobit series** products provide full types of anti-drone products, offering solutions for different application scenarios.

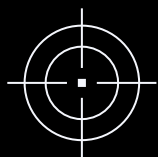

HOBIT D3 PRO

Portable UAV Detector

Key Features:

- 3km Detection Range
 - Identified and show UAV models
 - Detection Frequency Range: 100MHz-8GHz
 - Supports both audible and vibration alerts
 - Supports integrated Drone Jammer and Spoofer
 - Supports External directional detection antennas
 - Direction-finding accuracy error $\leq 15^\circ$
-
- Supports external backpack-mounted expansion modules for signal guidance against unauthorized UAV targets.
 - Covering Detection drone signals such as DJI, Autel and other drone image transmission, enhanced WiFi, LoRa, TBS, ELRS, and Lightbridge etc.

**Detection
3000m**

IP 65

6h

AEROSEEK

HOBIT P2 PRO

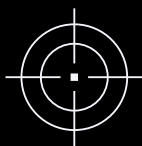

Counter-UAV Solution

Key Features:

- High performance directional antenna
- Detection frequency 1.4GHz-6.0GHz
- Jamming frequency 900Mhz, 1.2GHz, 1.5GHz, 2.4GHz, 5.2GHz, 5.8GHz
- Shield-shape design with ergonomics handle & Button
- Build-in 3.5' Screen display system status
- Dual mode, 'C2' and 'GNSS'
- Detect and classified drones, show direction

- Hobit P2 Pro portable UAV detection system with multi-frequency strike.
- Has High-performance detection antenna, After the specified operation, Accurate drone bearings can be obtained.
- Shield Drone gun Hobit P2 Pro device supports two operating modes: "C2 mode" and "GNSS mode", which can be used simultaneously or separately.

Detection
1500m

Jamming
1500m

AEROSEEK

HOBIT S2

AI Powered Counter-UAV Stationary Solution

Key Features:

- 10KM Detection Range
- 100MHz-10GHz UAV Detection Frequency
- UAV detection accuracy up to 99.99%
- AI Detection ≥ 400 Different UAV Models
- Supports unique UAV RF fingerprint identification With whitelist/blacklist management
- Fully offline Drone ID decoding for UAV authentication, trajectory tracking and manage
- Real-time full-band spectrum display and fpv Analog video capture

- **Accurate Identification:** Can detect over 400 drone models and their IDs with accurate UAV model identification and unique electronic fingerprints.
- **Compatibility:** Compatible with fixed and gimbal jamming devices, and supports connection to navigation spoofing equipment.
- **Unattended Operation:** Supports 24-hour unattended monitoring, passively detecting surrounding drone signals.

Detection

Decoding

AEROSEEK

HOBIT SJ2

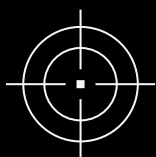

AI Powered Counter-UAV Stationary Solution with six sector directional Jammer

Key Features:

- 10KM Detection Range
- 100MHz-10GHz UAV Detection Frequency
- UAV detection accuracy up to 99.99%
- AI Detection ≥ 400 Different UAV Models
- Supports unique UAV RF fingerprint identification With whitelist/blacklist management
- Fully offline Drone ID decoding for UAV authentication, trajectory tracking and manage
- Supports Jamming against ELRS, OFDM, FM ASK, PSK, and other signal protocols
- Real-time full-band spectrum display and fpv Analog video capture

- **AI Identification:** AI-powered recognition of 400+ UAV models with ID decoding and identity authentication support
- **Black And White List:** Automatically responds to blacklisted UAVs while supporting whitelist protection for authorized friendly units.
- **Ultra-range Jamming:** The six sector directional jamming antenna system adopts multi-sector cooperative radiation architecture, featuring high gain, wide coverage and high directional suppression capability.

AEROSEEK

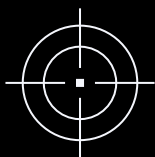

HOBIT SJS

AI Powered Counter-UAV Stationary 3-in-one Solution

Key Features:

- 10KM Detection Range
 - 100MHz-10GHz UAV Detection Frequency
 - UAV detection accuracy up to 99.99%
 - Unique UAV RF fingerprinting for whitelist/black list management
 - Supports offline ADS-B/RID/DID identification and decoding
 - Real-time full-band spectrum display and fpv Analog video capture
 - Supports Jamming against ELRS, OFDM, FM ASK, PSK, and other signal protocols
 - Supports UAV navigation signal spoofing for GPS/BDS/GLONASS/Galileo, Expandable up to 13 frequency points
- **AI Identification:** AI-powered recognition of 400+ UAV models with ID decoding and identity authentication support
 - **Black And White List:** Automatically responds to blacklisted UAVs while supporting whitelist protection for authorized friendly units.
 - **Target Spoofing:** Enables UAV positioning guidance and trajectory deviation through satellite navigation signal spoofing involving GPS and related GNSS systems

Detection
10 Km

Jamming
4 Km

Decoding

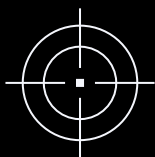

HOBIT XL1

Portable Starlink Terminal Tracker

Key Features:

- Starlink Scanning Detection range ≥ 10 km
 - Built-in TTS Voice Module real-time broadcast
 - Supports monitoring within the Ku bands
 - Supports simultaneous detection across 8 frequency bands (14 GHz-14.5 GHz)
 - Supports Wi-Fi and 4G/5G wireless transmission data
 - Provides a graphical management interface for real-time detection data visualization
-
- **Signal Acquisition:** Adopt Ku-band signal processing to scan and capture satellite signals precisely via special antenna
 - **Direction finding:** Lock target beacon frequency and dynamically locate satellite IoT terminals accurately.

Detection
10 Km

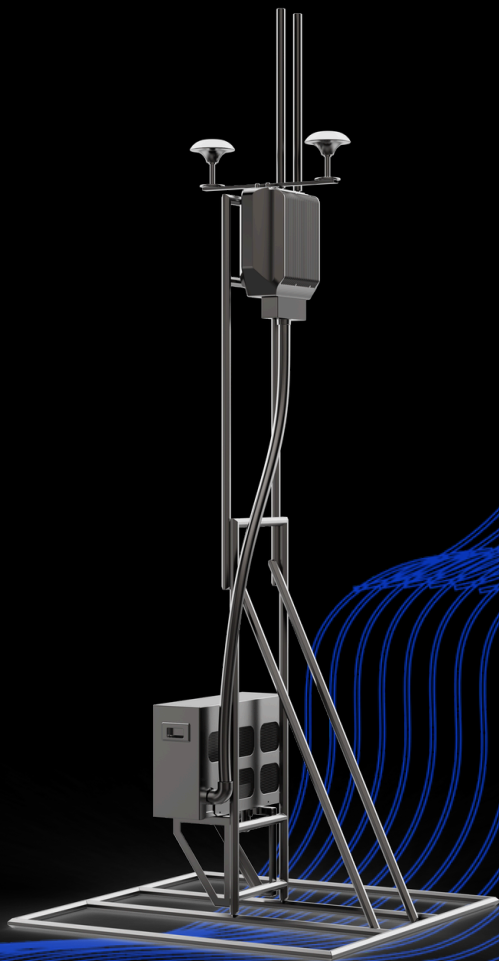

IP 65

4h

HOBIT SP1

GNSS Spoofing Device

Key Features:

- Maximum operating distance: $\geq 30\text{km}$
- Maximum operating height: $\geq 10\text{km}$
- Power adjustment range: 80dB
- Supports GPS, BDS, GLONASS, Galileo, maximum 23bands.
- RF total power: $\geq 350\text{w}$ (1.2CH $\geq 200\text{w}$, 1.6CH $\geq 200\text{w}$)
- Navigation satellite signal synchronization time: $< 240\text{s}$
- Power on start-up time: 40s;

- It can perform navigation deception on unmanned aerial vehicles that rely on satellite navigation positioning systems
- Support external direction finding module to identify target orientation
- Support external commands to control the combination and transmission of any navigation signal

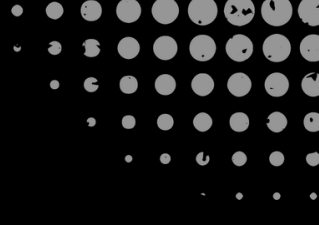

Spoofing
30Km
